WELCOME

Established in 1975 and originally specializing in 3D glass fibre lettering, corporate logos and harelddeck crests, Signkor has grown from strength to strength, and encompasses the latest trends and developments to produce top quality signage.

Signkor is a founding member of the Gauteng Sign Association, and member of The Johannesburg Chamber of Commerce and Industry since 1989. The Company won the SBDC award in May 1996.

Signkor has successfully managed a Countrywide rebrand of a major Banking institution (2006/2007).

PROFILE

Norman Witt, Chief Executive Officer of the Company, has been with Signkor since 1989, taking over the reigns in 1995. Signkor expanded manufacturing capabilities to encompass a broad range of signage requirements. Signkor is now able to offer a range to meet the specific requirements of its Clients. This includes everything from large 3D logo's, light boxes profile, neon, fluorescents, fabricated Perspex, vinyl graphics, slat boards, fibre glass signage and much more. The Company also manufactures specialists signs and trophies, and is equipped to engrave marble. In addition, Signkor fabricates stainless steel and does all its own on-site rigging. The Company has four full time rigging teams and employs sub-contractors that it uses countrywide, on demand.

HIGH PROFILE CLIENTS

Signkor's Clients include a number of Supermarket Stores, some of the major Banks, Furniture Groups, Pharmaceutical companies, Property developers, holiday resorts as well as individually owned companies. Its services are used by Architects, quantity surveyors, project managers and building contractors. "We work very closely together on developments and endeavour to take the hassle out of applying signage to a building or development."

As no two sites are identical, whether it be internal or external, each unique requirement is catered for in Signkor's product range which includes the services of an in-house professional team – Project Managers, Sales Consultants, Designers, Architectural Engineering services and administration department (with council applications where applicable). We are able to advise and create each unique installation using our product range from pylon signs through to neon, fluorescent, neon illuminated, internal directional and informational quality signage. Materials used in the manufacture of signs include quality products manufactured from steel, stainless steel, acrylic sheets, Perspex, vinyl, brass, aluminium, chromadek, supawood and fibre glass.

Signkor is able to manufacture individual letters in excess of three meters high, right through to individual letters of 35mm. "There is no job too big or too small that we are unable to manufacture and install. We strive to supply a maintenance free product with high impact and visibility to fit within the client's budget. Thus providing them with the Signkor code of service."

LED DIGITAL SCREENS

We are one of the leaders in LED Digital Screen Illumination in South Africa. We have a vast range of LED Digital Screens . We will customize a design and recommend a product to meet your specific requirements.

TOP CLASS PRODUCTION FACILITY

Production facilities are based in Johannesburg and was established in 1975. The Johannesburg premises – which measures 1200m² and into which the company moved to in November 1997 due to it's rapid growth and expansion – is owned by Signkor. Getting back to Signkor's roots, and more specifically the product that initially put us on the map, Signkor was the first company in South Africa to manufacture fibre glass 3D signs. Signkor held the patent for the manufacture of fibre glass signs for 15 years, after which other companies jumped on the bandwagon.

PERSPEX

Perspex is used by many of our clients. The Perspex is either cut out and used in a flat application, or the more popular way of 3D fabricated perspex letters, size to suite client.

These are used in conjunction with illumination to create a high impact sign.

A VOTE OF CONFIDENCE

On the subject of service and top quality products, Signkor ranks very highly – not only in South Africa, but across the border as well. The company is currently manufacturing components for export.

However, a little closer to home, Signkor is a company that's earned itself a reputation for producing excellent quality signage coupled with great customer service. No doubt, keeping with the latest technological developments in the signage industry, coupled with the commitment to quality has contributed to ensuring that Signkor is producing some of the best signage around. "At Signkor, we salute ongoing technology in our field and encourage creativity in line with growing trends". The success of the company is attributed to team work, in providing customer care with no compromise on service.

This has resulted in the company acquiring and maintaining it's base of satisfied customers who rely on Signkor's quality workmanship and are extremely satisfied with the companies after sales service. Additionally, the fact that Signkor provides a seven day week service, and is comprised of a very young dedicated staff and management team, goes a long way towards reassuring it's clients of it's ongoing commitment to quality, service and creativity.

Providing a one-stop-shop, Signkor has three in-house designers who strive to create eye-catching signage. Commenting on the overall team effort of all Signkor. "Something of the old world still lives on, in that our creative people continue the tradition where sign making is a craft and customer care is a way of life".

“It is by maintaining our old fashioned philosophies that we have succeeded not only in retaining our valued customers, but are constantly expanding our prodigious client base”.

PYLONS

Most pylons are designed at Signkor in conjunction with the client brief. After approval, engineer’s drawings are obtained for structural detail. The end result is a structurally sound highly visible product for the client.

The pylons are manufactured from steel and are either galvanized or shot blasted and primed, before the required colour of the structure is spray painted.
